## Important Instructions

### 3 simple steps

1. Very important: Charge the biowashball in the sunlight for a minimum of 2 hours prior to first use. Thereafter, recharge the biowashball for 1 hour per month. This will regenerate the micro ceramics to ensure maximum cleaning and anti-bacterial action
2. To clean any detergent/powder residue inside your washing machine, do 1 hot cycle with a cup of vinegar (*add to the tray/s you would normally use for washing powder/ softener*)
3. To complete the process do 1 cycle set on very hot water (do not add anything else)

Now you are ready to throw away detergent forever

### TIPS for use:

- The Biowashball® works with cold water, so you can save on electricity
- Pre treat stubborn stains as usual. You can use an ECO friendly whitener
- To add fragrance to your washing you can use an ECO friendly softener OR essential oils although softener is not necessary at all with Biowashball®
- Do NOT use regular softener; it will coat the ceramics inside the ball
