

# The Freshest Water: Provided Free By Mother Nature.

(and a rain harvesting and storage system from Watersmart)

SMART  
TECHNOLOGY  
COLLECTION & STORAGE

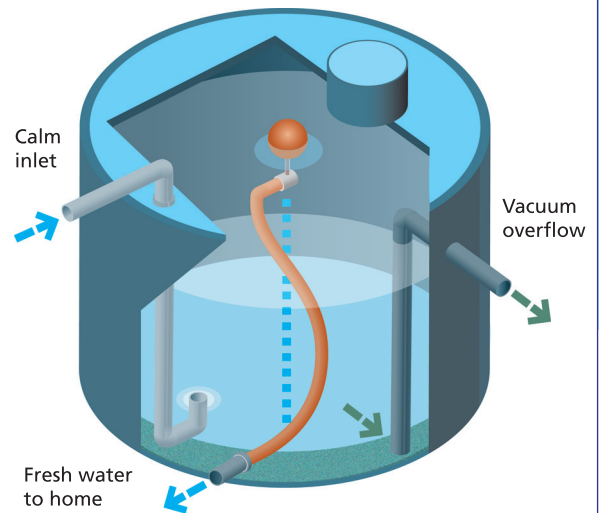

**Watersmart offer a range of advanced rain harvesting and tank systems designed to provide your home with the freshest water:**

As rain falls, a 'first flush' diverter allows the first few litres to run off, carrying away any roof-borne contaminants, dust and organic debris, before collection begins.

From there, water is gently fed to the bottom of a storage tank through a 'calm' inlet, which prevents new and older water mixing, and ensures the freshest, most oxygenated water moves to the top, to be drawn off first.

The 'first in, first out' overflow cycle means your home is supplied with the freshest water possible from your in-ground, or free-standing storage tank.
